Notice of Fee Increase on January 1, 2003

If a reply to a "Notice of Allowance and Fee(s) Due" is filed in the Office on or after January 1, 2003, then the amount due will be higher than that set forth in the "Notice of Allowance and Fee(s) Due" since there will be an increase in fees effective on January 1, 2003. See Revision of Patent and Trademark Fees for Fiscal Year 2003; Final Rule, 67 Fed. Reg. 70847, 70849 (November 27, 2002).

The current fee schedule is accessible from: <http://www.uspto.gov/main/howtofees.htm>.

If the issue fee paid is the amount shown on the "Notice of Allowance and Fee(s) Due," but not the correct amount in view of the fee increase, a "Notice to Pay Balance of Issue Fee" will be mailed to applicant. In order to avoid processing delays associated with mailing of a "Notice to Pay Balance of Issue Fee," if the response to the Notice of Allowance and Fee(s) due form is to be filed on or after January 1, 2003 (or mailed with a certificate of mailing on or after January 1, 2003), the issue fee paid should be the fee that is required at the time the fee is paid. If the issue fee was previously paid, and the response to the "Notice of Allowance and Fee(s) Due" includes a request to apply a previously-paid issue fee to the issue fee now due, then the difference between the issue fee amount at the time the response is filed and the previously paid issue fee should be paid. See Manual of Patent Examining Procedure, Section 1308.01 (Eighth Edition, August 2001).

Questions relating to issue and publication fee payments should be directed to the Customer Service Center of the Office of Patent Publication at (703) 305-8283.

DETAILED ACTION

Receipt is acknowledged of the supplemental appeal brief, filed on 3/17/2003, and the amendment, filed on 5/15/2003, which have been entered in the file. Claims 1-21, 24-27, 29 and 30 are pending.

Allowable Subject Matter

1. Claims 1-21, 24-27, 29, and 30 have been allowed over the prior art of record.
2. The following is an examiner's statement of reasons for allowance: The prior art of record, taken alone or in combination, fails to teach or fairly suggest: a method including the steps of capturing an image of a user of a deposit accepting machine, capturing an item image of a deposit item placed inside the deposit accepting machine, and displaying the user image and the item image to the user through a display connected to the deposit accepting machine, in combination with the other claimed limitations as set forth in the claims.

Peters et al (US 6,164,529, previously cited) teaches a method comprising the steps of: capturing a user/depositor image of a user/depositor with an external area imaging device (digital camera 44), wherein the external area imaging device has a field of view including an exterior area outside of a deposit accepting machine (ATM 10), capturing an item image of a deposit item (via a document processing module 40), storing the user image and the item image in associated relation in a storage device (flex disc 34) (see figures 1-3, column 1 line 58 - column 2 line 23, and column 2 lines 41-59 62-65). However, Peters et al does not specifically teach displaying the user/depositor image and the item image on a display connected to the deposit

accepting machine, rather, Peters et al teaches displaying the images on a home banking PC (see figure 4 and column 3 lines 4-13). While Peters et al does teach the deposit accepting machine allowing the user to verify the information written to the flex disc (see figure 3 and column 2 lines 62-65), as discussed in applicant's appeal brief filed on 10/3/2002 (see pages 12-14), verifying the information written to the flex disc does not inherently require the viewing of the images written on the flex disc.

Cataldo et al (US 4,245,902, previously cited) teaches a method comprising the steps of: capturing a user image of a user with an external area imaging device (lens 26 of dual camera 25), wherein the external area imaging device has a field of view including an exterior area outside of a deposit accepting machine, capturing an item image of a deposit item placed inside the deposit accepting machine with an interior area imaging device (lens 27 of dual camera 25), wherein the interior area imaging device has a field of view including an interior area inside the deposit accepting machine, the user image and the item image are recorded for simultaneous display (see figure 3) through a display device (not shown) (see figures 1-3, column 1 lines 19-23, 35-46, column 1 line 56 - column 2 line 26, column 2 lines 50-53). However, there is no teaching or suggestion in Cataldo et al to display the images to the user on a display connected to the deposit accepting machine.

Both Peters et al and Cataldo et al teach capturing a user image and an item image for the purpose of verifying the deposit transaction data at a later time, not at the time of the deposit.

While Johnston (US 5,673,333, previously cited) and Graef et al (US 5,540,425, previously cited) both teach displaying an item image on a display connected to a deposit accepting machine (see column 5 lines 8-18, of Johnston, and also column 13 lines 58-62 and column 24 lines 58-66, of Graef et al), there is no teaching or suggestion to capture and display a user image on a display connected to the deposit accepting machine.

Thus, even when combined, the prior art of record does not teach displaying a user image through a display connected to the deposit accepting machine.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Simon (US 2003/0085266 A1) teaches a deposit accepting machine that captures an image of a user and a deposit item, however, there is no teaching of displaying either image to the user through a display connected to the deposit accepting machine.
